DETAILED ACTION

TITLE

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The presently pending claims are all directed to an apparatus, whereas, in contrast, the title includes both a method and apparatus.

OBVIOUSNESS-TYPE DOUBLE PATENTING

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-17, 19-36, 38, and 39 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No. 6,375,903 in view of U.S. Patent No. 5,744,101. The instant claims as listed above contain the same limitations as that of U.S. Patent No. 6,375,903; except for the citation of a flow cell for DNA array synthesis. Fodor et al. (U.S. Patent No. 5,744,101) is cited as a disclosure directed to the synthesis of DNA probe arrays, as summarized in

Art Unit: 1631

the abstract, wherein the claims therein describe the synthesis as being performed with the usage of a flowcell over the array surface. This flowcell usage is also described in Fodor et al. in column 9, lines 32-63, and also motivated for a variety of polymer synthesis practices as summarized in column 4, lines 17-67. The description in the SUMMARY OF THE INVENTION section in Fodor et al. in column 1, line 42, through column 2, line 3, includes motivation to utilize such a reactor system in array synthesis as an improvement for computer automation as is well known for increased efficiency and speed. The instant claims lack preparatory apparatus limitations, but must obtain arrays for usage in the apparatus as claimed thus motivating array synthesis apparatus and/or related methods in the art. Thus, it would have been obvious to utilize array synthesis apparatus as in the prior art such as set forth in Fodor et al. with the instant claims to result in the practice of the claims of U.S. Patent No. 6,375,903.

No claim is allowed.
